THE DATA DEMOCRATIZATION IMPERATIVE

Data is the Currency and Everyone Wants to Feed AI

328M

TB created daily

73%

of enterprise data

goes unused

4.5×

ROI multiplier

The Promise

Faster, self-service insights for every role

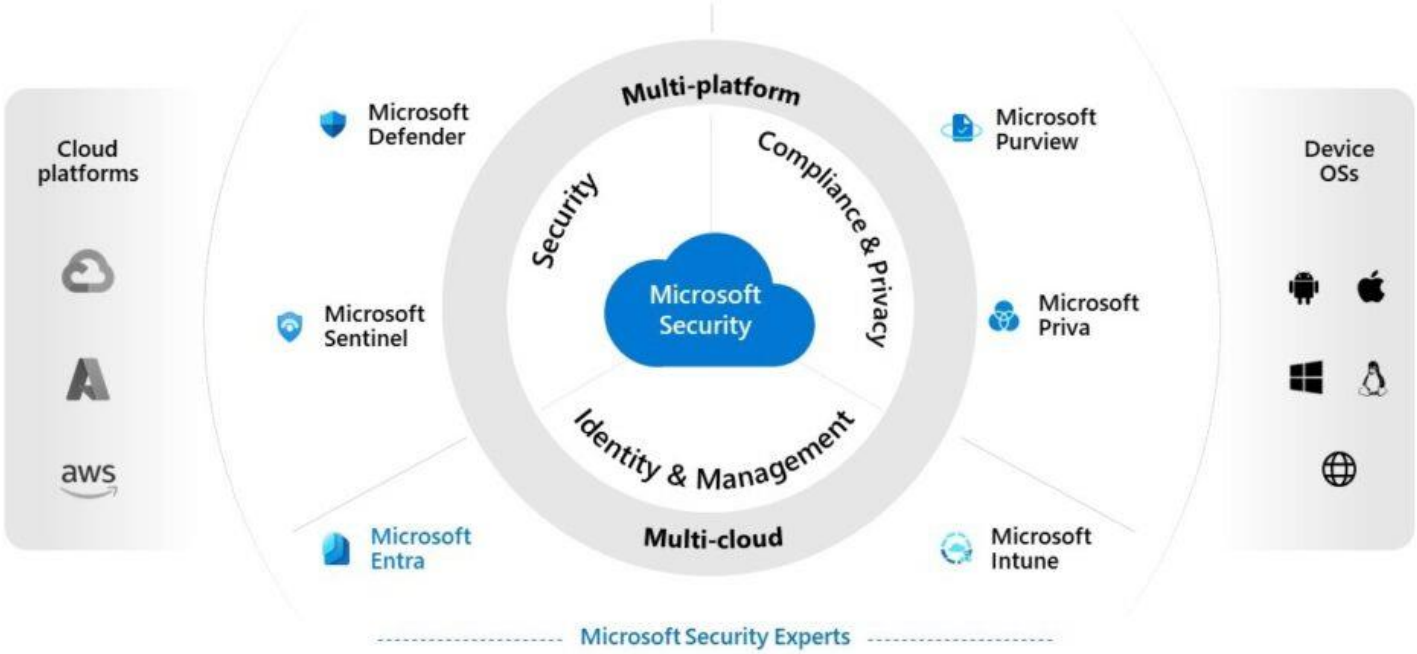

The Peril

Oversharing · Compliance risk · Shadow AI

Not about databases. All about protecting your DATA!

Microsoft Security Product Portfolio

Microsoft's privacy commitments apply to AI
We will keep your organization's data private.
Your organization's data is not shared.
You are in control of your organization's data.
Your organization's data security and privacy are protected by design.
Your access control and enterprise policies are maintained.
Your organization's data is not used to train foundation models.
Our products and solutions comply with global data protection regulations.
Shared Responsibility!

CHALLENGES

The Modern Data Landscape Is a Minefield

Data Sprawl

Unclassified, ungoverned, everywhere

Insider Threats

60% of breaches involve insiders

Shadow IT & Shadow AI

Unapproved AI tools, invisible uploads

CHALLENGES

The Modern Data Landscape Is a Minefield

Compliance Pressure

GDPR · HIPAA · CCPA · AI regulations

Multi-Cloud Complexity

A fragmented security posture

AI Access Without Control

AI becomes an exfiltration vector

AI for Every Employee

Respects Permission Boundaries

AI is now in most applications, but is it safe?

Sensitivity Label Inheritance

This is needed, but rarely implemented.

Audit & Compliance Logging

Knowing who is using what AI is important, as AI is often misunderstood.

UNIFIED ARCHITECTURE

Microsoft Secure AI Platform Built on Zero Trust Principles

IDENTITY & ACCESS	Microsoft Entra ID · Entra Agent ID · Conditional Access · PIM
DATA CLASSIFICATION	Microsoft Purview · Microsoft Priva · DSPM for AI · Sensitivity Labels · Data Map
THREAT PROTECTION	**MS Defender for Cloud Apps** · Defender XDR · Sentinel (Unified SecOps + Data Lake)
AI SERVICES	Azure AI Foundry · Copilot for M365 · Copilot Studio · Agent 365
GOVERNANCE & COMPLIANCE	Azure Policy · Regulatory Compliance Dashboard · Audit Logs

Microsoft EntraID

Conditional Access: access adapts to context

- User & group
- Device health (Intune)
- Location
- App sensitivity
- Real-time risk score
- Authentication strength

Sponsors & Lifecycle

Accountable owner, expiring access

Conditional Access for Agents

Same adaptive policies as users

Identity Protection & Risk Scoring

Risky agents blocked automatically

Agent 365 Control Plane

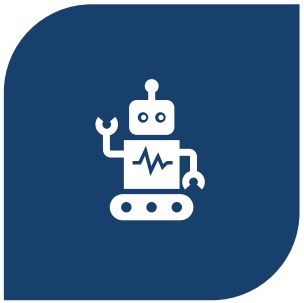

One inventory of every agent

Access Packages & Reviews

Time-bound, reviewed access

GA April 2026: a governed identity for every agent

Identify & Access Management Outside of Microsoft

OKTA WORKFORCE IDENTITY: 7K+ CONNECTORS, ADAPTIVE MFA

PING IDENTITY: MODULAR, API-FIRST ACCESS JOURNEYS

JUMPCLOUD: CLOUD DIRECTORY + DEVICE MANAGEMENT

Where This Lands for SQL Server, Azure SQL & Fabric

What Changes for the Database Team?

Governance moves from the M365 layer into the data platform itself

Defender for Azure SQL

Continuous vulnerability & threat protection

Data Discovery & Classification

Native column scanning & labels

On-Prem SQL Server Gap

No column-level discovery on-prem

Purview Scanning for OneLake

Not scanned by default: register it

Labels That Follow the Data

OneLake labels flow to Power BI

DLP for Fabric Items(outside of Fabric IQ)

DLP for lakehouses & warehouses

MICROSOFT PURVIEW

Know Your Data: Discover, Classify & Protect

What Is Microsoft Purview?

Part of Microsoft's Zero Trust data layer

Data Map & Catalog

Auto-scan 200+ sources

Sensitivity Labels

Labels persist everywhere, even in AI output

Data Loss Prevention

550+ sensitive info types

Information Barriers

Stop sharing between groups

Records Management

Automated retention & deletion

Compliance Manager

Score against 360+ standards

MICROSOFT PURVIEW

DSPM for AI: Seeing What Copilot and Agents Actually Touch

What Is DSPM for AI?

The 2026 unified Data Security Posture Management experience

AI Activity Insights

Every prompt, response and file

One-Click Policies

Copilot policies live in minutes

Data Risk Assessments

Find oversharing before agents do

Oversharing Remediation

Flagged risk → fixed permission

Security Copilot Automation

Agents triage & draft fixes

Coverage Across the Estate

M365, Azure, Fabric & SaaS

This is available in the main DSPM dashboard

What Does a Purview Dashboard Look Like?

Data Security & Privacy (DSPM) Space

Priority	Best Alternatives
Enterprise data catalog & stewardship	Collibra, Informatica, Alation
Modern data team collaboration	Atlan, data.world
DLP across endpoints & network	Forcepoint, Symantec, Trellix
Cloud/SaaS DLP & CASB	Netskope, Strac
Data discovery & privacy compliance	BigID, OneTrust, Securiti.ai
Data access governance	Varonis, Immuta, Cyera
Compliance automation (SOC 2, ISO)	Vanta, Drata
Microsoft 365-specific governance	AvePoint, Varonis

MICROSOFT PURVIEW

Data Governance 101

Data Map

Scan & catalog every source

Sensitivity Labels

Labels travel with the data

Data Loss Prevention

Stop PII, PHI & secrets leaving

MICROSOFT PURVIEW

Data Governance Foundation for Secure AI

Insider Risk Mgmt

Spots risky behavior patterns

eDiscovery & Audit

Every Copilot interaction logged

DSPM for AI

Which AI touched which data

Priva & Purview: Privacy Risk vs. Data Governance

What Is Microsoft Priva?

Purpose-built for personal data and privacy risk

Priva = privacy & rights
Purview = the whole data estate

Privacy Risk Management

Find overexposed personal data

Privacy Assessments

Automated processing records

Subject Rights Requests

Access & deletion workflows

Tracker Scanning & Consent

Trackers & cookie consent

Built on Purview's Classification

Reuses Purview labels & types

Separate License, Shared Signal

Add-on license beyond E5

MICROSOFT SENTINEL

Cloud-Native SIEM + SOAR, Now Unified with Defender XDR

What Is Microsoft Sentinel?

Cloud-native SIEM + SOAR, unified with Defender XDR

Data Connectors (300+)

M365, AWS, GCP, Okta & more

Automated Playbooks

Automated response via Logic Apps

Threat Intelligence

Microsoft TI + STIX/TAXII feeds

Sentinel Data Lake & Graph

12-year retention & attack-path graph

Sentinel in Action: Securing Data & AI Workloads

Detecting Shadow AI Usage

1. Upload to ChatGPT flagged
2. Alert lands in Sentinel
3. Session auto-blocked
4. Tied to insider risk score

Azure OpenAI Access Anomaly

1. API call spike detected
2. UEBA flags the anomaly
3. Copilot sizes the blast radius
4. Token revoked, ticket opened

Data Exfiltration via Copilot

1. 50+ confidential docs summarized
2. Risk score escalates
3. Correlated with USB activity
4. HR notified automatically

50%	80%	300+	< 5 min
Faster detection	Less alert fatigue	Data connectors	Mean time to respond

MICROSOFT INTUNE

Endpoint Management: Securing the Device That Touches Your Data

What Is Microsoft Intune?

One console to secure every device.
The device is the last-mile risk for AI.

MDM & MAM

Corporate devices & BYOD apps

Compliance Policies

Unhealthy devices get blocked

App Protection Policies

No pasting AI output into personal apps

Endpoint Privilege Mgmt

Temporary admin, never permanent

Remote Help & Autopilot

Zero-touch setup, private support

Tunnel & VPN Gateway

Per-app VPN for managed apps only

Intune in Practice: Securing the AI-Enabled Endpoint

Blocking AI Output Leakage

AI output can't be pasted into personal apps, even on unenrolled BYOD

Compliant Device for Copilot Access

No compliant device, no Copilot or Azure OpenAI access

How Intune Plugs Into the Microsoft Security Stack

Intune

Compliance signal & device health

→

Entra ID

Conditional Access policy engine

Defender for Endpoint

Threat & risk score feed

→

Purview

DLP for managed app content

Intune is the trust anchor for t

Shadow AI

- Any unauthorized AI in your organization
- Free ChatGPT: over 54% PII
- Managed today with SWG or CASB

MICROSOFT DEFENDER FOR CLOUD APPS

Full Visibility, Intelligent Control, Even Real-Time Protection

Cloud Discovery

- Discover every app, incl. shadow AI
- Risk scores on 90+ factors
- Block or sanction apps
- Spot uploads to ChatGPT, Claude & more

Data Protection (DLP)

- Real-time session controls
- Block sensitive uploads
- Apply Purview labels
- PII, PHI & PCI policy templates

What Full Visibility Looks Like

Threat Detection

- Behavioral analytics (UEBA)
- Impossible travel & token theft
- Insider risk correlation
- Automated remediation

Compliance & Governance

- 250+ app compliance certificates
- GDPR, ISO 27001, SOC 2 gap checks
- Salesforce, Box, GitHub & Google APIs
- One incident queue with Sentinel

Example of MS Defender for Cloud Apps Reports

When You Can’t Have MS Defender for Cloud Apps

Three Categories to Cover:

- **Tier 1:** CASB/SSE Leaders with Strongest Shadow AI Capabilities
- **Tier 2:** SaaS Security Posture & Identify-Centric Tools
- **Tier 3:** Purpose-Built AI Governance/Shadow AI Platforms

Tier 1

CrowdStrike Falcon AIDR: end-to-end AI access tracking
Zscaler Zero Trust Exchange: inspects & auto-blocks AI uploads
Palo Alto Prisma + Unit 42: network & SaaS analytics
Skyhigh Security: data-aware shadow AI discovery
Cisco Umbrella + Cloudlock: DNS-layer AI blocking
Forcepoint CASB: reports on & controls AI use

Tier 2

Grip Security: finds AI tools connected via OAuth

DoControl: app-to-app shadow AI visibility

Obsidian Security: SaaS threat detection & response

Tier 3

Securiti.ai: LLM firewalls for prompts & responses

Lasso Security: purpose-built AI security

Zentera: dedicated shadow AI security

Data Security Ramp-up Example

RECOMMENDATIONS

Secure, AI-Enabled Data Democratization

Phase 1

(0–90 days)

- Deploy the Purview Data Map
- Find shadow AI with Defender for Cloud Apps
- Roll out sensitivity labels

RECOMMENDATIONS

Secure, AI-Enabled Data Democratization

Phase 2

(90–180 days)

- DLP: block PII/PHI to unsanctioned apps
- Session controls for high-risk SaaS
- Lock down AI Foundry; register agents in Agent ID

RECOMMENDATIONS

Secure, AI-Enabled Data Democratization

Phase 3

(180+ days)

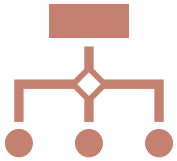

- Self-service RAG on AI Foundry + AI Search
- Copilot with label filters & audit on
- Security Copilot in the SOC; Agent ID for every agent

Purview · Defender · Entra Agent ID · Copilot & AI Foundry

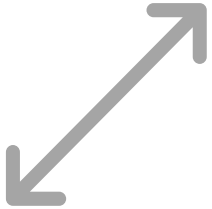

Build a Data Security Suite from the Org Level

Makes it easy to ensure you're covered

There is overlap and if you don't know what you don't know, you can have a gap.

There are other products that can fill that gap if you don't have everything.

Thank you!

Thanks for rocking PNW Day of Data

References

Microsoft EntraID

Conditional Access: Policies dynamically adapt authentication and access requirements based on contextual factors such as user location, device compliance, sign-in behavior and detected threats.

- User & group identify
- Device compliance (it the device managed and healthy(with Intune)
- Location: named locations, country/IP range and GPS-based
- Application sensitivity: different policies per app
- Real-time risk score:fed in from identify protection
- Authentication strength: FIDO2, MFA, password-only, etc.

Features Protecting All of the Data

- Identify Protection: AI-Driven Risk Detection
- Privileged Identity Management(PIM)
- Multi-factor Authentication, Phishing-Resistant
- Identity Governance with Lifecycle & Access Certification
- Zero Trust & Least Privilege Enforcement
- Audit Logs, Sign-in Logs & SIEM Integration
- Workload Identify Protection
- Compliance & Regulatory Alignment for SOX, HIPAA, SOC 2 and ISO 27001 compliance

Entra Agent ID: Governing AI Agents Like Employees

What Is Microsoft Entra Agent ID?

Extends Zero Trust identity to AI agents

Agent Identity Blueprints

Templates that define an agent's permissions, Conditional Access rules, and risk policy. Every instance created from a blueprint inherits them automatically.

Sponsors & Lifecycle

Every agent identity requires an accountable owner. Access expires on a schedule instead of persisting indefinitely, which prevents orphaned agents.

Conditional Access for Agents

The same adaptive access policies applied to users now apply to agents, evaluated in real time against location, risk, and resource sensitivity.

Identity Protection & Risk Scoring

Agents get their own risk signals. A compromised or anomalous agent can be blocked automatically, the same way a risky sign-in is.

Agent 365 Control Plane

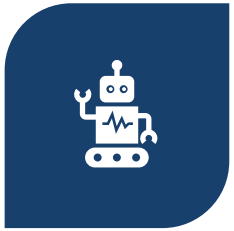

A single inventory of every agent across the tenant: what it can access, how it's behaving, and who owns it.

Access Packages & Reviews

Time-bound, auditable access requests extend to agents. Entitlement management and access reviews now cover nonhuman identities.

Entra Agent ID IS GA as of April 2026a , so distinct, governed identity for every agent, not a shared service principal

Identify & Access Management Outside of Microsoft

OKTA WORKFORCE IDENTIFY: ACCESS MANAGEMENT WITH OVER 7K PRE-BUILT CONNECTORS, LIFECYCLE MANAGEMENT CAPABILITIES AND ADAPTIVE MFA. CAN EVALUATE CONTEXTUAL SIGNALS AND REDUCE FRICTION FOR LOW-RISK SIGN-INS WHILE BLOCKING SUSPICIOUS ONES.

PING IDENTITY: MODULAR AND API-FIRST, DESIGNED FOR ORGANIZATIONS THAT NEED TAILOR AUTHENTICATION AND ACCESS JOURNEYS ACROSS EMPLOYEES, PARTNERS AND CUSTOMERS, BUT IN A SINGLE PLATFORM.

JUMPCLOUD: A CLOUD-NATIVE DIRECTORY PLATFORM WITH UNIFIED IDENTIFY, DEVICE MANAGEMENT, ACCESS CONTROL WHILE SUPPORTING WINDOWS, MACOS AND LINUX. HAS ZERO TRUST ARCHITECTURE.

Comparison on Identity Products

Need	Best Alternatives
Full Entra ID replacement	Okta, Ping Identity
Non-Microsoft cloud directory	JumpCloud
Privileged Access / PIM replacement	CyberArk, BeyondTrust, Delinea
Identity Governance (IGA)	SailPoint, Saviynt, Omada
Standalone MFA only	Cisco Duo, RSA SecurID
Hybrid/on-prem heavy	Ping Identity, ManageEngine AD360
Customer identity (CIAM)	Auth0, Ping, Okta Customer Identity
Non-human / AI agent identity	Astrix Security, Oasis Security, Entro Security

Where This Lands for SQL Server, Azure SQL & Fabric

What Changes for the Database Team?

Governance moves from the M365 layer into the data platform itself

Defender for Azure SQL

Vulnerability assessment and advanced threat protection run continuously against Azure SQL Database, Managed Instance, and Synapse, with express onboarding built in.

Data Discovery & Classification

Native to Azure SQL Database, Managed Instance, and Synapse. Scans columns, recommends labels, and reports classification coverage without deploying an agent.

On-Prem SQL Server Gap

Defender for SQL Server on Machines covers vulnerabilities and threats, but not column-level data discovery. Use Purview or native SQL Data Discovery & Classification for that.

Purview Scanning for OneLake

Fabric OneLake isn't scanned by default. Registering it in the Purview Data Map brings lakehouses, warehouses, and KQL databases into the same catalog as everything else.

Labels That Follow the Data

A sensitivity label on a Delta table in OneLake carries through to the Power BI reports built on it in DirectLake mode, no re-labeling required downstream.

DLP for Fabric Items(outside of Fabric IQ)

Purview DLP policies now cover lakehouses, warehouses, SQL databases, and KQL databases in Fabric, blocking sensitive uploads and flagging risky sharing.

The OneLake catalog's Govern tab now surfaces the label-coverage and DLP reporting that used to live only in the Purview hub

Know Your Data: Discover, Classify & Protect

What Is Microsoft Purview?

Part of Microsoft's Zero Trust data layer

Data Map & Catalog

Auto-scan 200+ sources including Azure SQL, Fabric OneLake, ADLS, and SAP. Build a live inventory of your data assets with lineage tracking.

Sensitivity Labels

Apply labels like Public, Confidential, and Highly Confidential that persist across Word, Excel, Teams, email, and AI-generated content.

Data Loss Prevention

550+ built-in sensitive info types (SSNs, credit cards, PHI). Block exfiltration via email, Teams, SharePoint, and cloud uploads in real time.

Information Barriers

Prevent specific user groups from communicating or sharing data with each other, which is essential for regulated industries and M&A scenarios.

Records Management

Automated retention and deletion policies aligned to GDPR, SEC 17a-4, FINRA, and other regulatory frameworks.

Compliance Manager

Continuous compliance score with actionable improvement actions mapped to 360+ regulatory standards including ISO 27001, SOC 2, and NIST.

Purview governs the full data lifecycle: from discovery to deletion, and across every cloud, app, and AI service

DSPM for AI: Seeing What Copilot and Agents Actually Touch

What Is DSPM for AI?

The 2026 unified Data Security Posture Management experience

AI Activity Insights

Visibility into every prompt, response, and file referenced by Microsoft 365 Copilot, Copilot Studio agents, and third-party AI apps like ChatGPT and Gemini.

One-Click Policies

Preconfigured DLP and label policies for Copilot interactions activate in minutes, no custom rule-building required to start collecting signal.

Data Risk Assessments

Automated weekly scans of your most-used SharePoint sites, plus on-demand assessments, surface oversharing before an agent finds it.

Oversharing Remediation

Guided, outcome-based workflows turn a flagged risk into a fixed permission, closing the loop instead of just reporting the finding.

Security Copilot Automation

Agents built into the new DSPM experience triage alerts and draft remediation, so a small governance team can keep pace with agent sprawl.

Coverage Across the Estate

Extends past Microsoft 365 into Azure, Fabric, and integrated third-party SaaS, consolidating DSPM (classic) and DSPM for AI (classic) into one view.

This is available in the main DSPM dashboard

Priva & Purview: Privacy Risk vs. Data Governance

What Is Microsoft Priva?

Purpose-built for personal data and privacy risk

Privacy Risk Management

Scans Exchange, SharePoint, OneDrive, and Teams for personal data, flagging overexposure, hoarding, and cross-border transfers with automated remediation nudges.

Privacy Assessments

Automates discovery, evaluation, and documentation of how personal data is used, replacing spreadsheet-based records of processing activity.

Subject Rights Requests

Structured intake, search, and fulfillment workflow for data subject access and deletion requests, now extended beyond Microsoft 365 data.

Tracker Scanning & Consent

Finds tracking technologies across your sites and helps manage the consent choices tied to them — cookie-law obligations Purview doesn't touch.

Built on Purview's Classification

Priva's risk detection draws on the same sensitive information types and labels Purview already maintains, rather than duplicating discovery.

Separate License, Shared Signal

Priva needs its own add-on licensing beyond E5 and Purview. Privacy asks whether personal data is handled lawfully; Purview asks whether data overall is protected from loss or misuse.

Priva governs personal data and privacy obligations — Purview governs the full data estate. Together they cover risk and rights

Cloud-Native SIEM + SOAR, Now Unified with Defender XDR

What Is Microsoft Sentinel?

Microsoft Sentinel is a cloud-native SIEM and SOAR platform built on Azure, now unified with Microsoft Defender XDR in a single security operations platform, with a purpose-built security data lake at its core.

Data Connectors (300+)

Ingest logs from Microsoft 365, Azure AD, Defender suite, AWS, GCP, Palo Alto, Okta, Salesforce, and hundreds more, all out of the box.

Automated Playbooks

Azure Logic Apps-powered SOAR playbooks for automated response: isolate hosts, revoke tokens, notify teams, create tickets in ServiceNow.

Threat Intelligence

Live Microsoft Threat Intelligence feeds integrated natively. STIX/TAXII connectors for external TI platforms like Recorded Future and MISP.

Sentinel Data Lake & Graph

Low-cost retention of security data for up to 12 years, with Sentinel Graph mapping relationships between assets, identities, and activity to trace full attack paths.

Sentinel in Action: Securing Data & AI Workloads

Detecting Shadow AI Usage

1. Defender for Cloud Apps flags upload to ChatGPT.com
2. Sentinel ingests the MCAS alert via native connector
3. Playbook auto-blocks the session and notifies the DLP team
4. Incident linked to Purview Insider Risk score for the user

Azure OpenAI Access Anomaly

1. Sentinel detects spike in Azure OpenAI API calls from a service principal
2. UEBA flags this as outside normal baseline behavior
3. Security Copilot summarizes the blast radius in plain English
4. Playbook revokes the OAuth token and creates a ServiceNow ticket

Data Exfiltration via Copilot

1. Employee uses Copilot to summarize 50+ Highly Confidential docs
2. Purview Adaptive Protection escalates risk score
3. Sentinel correlates with Teams DLP block and USB activity
4. HR is automatically notified via Logic Apps playbook

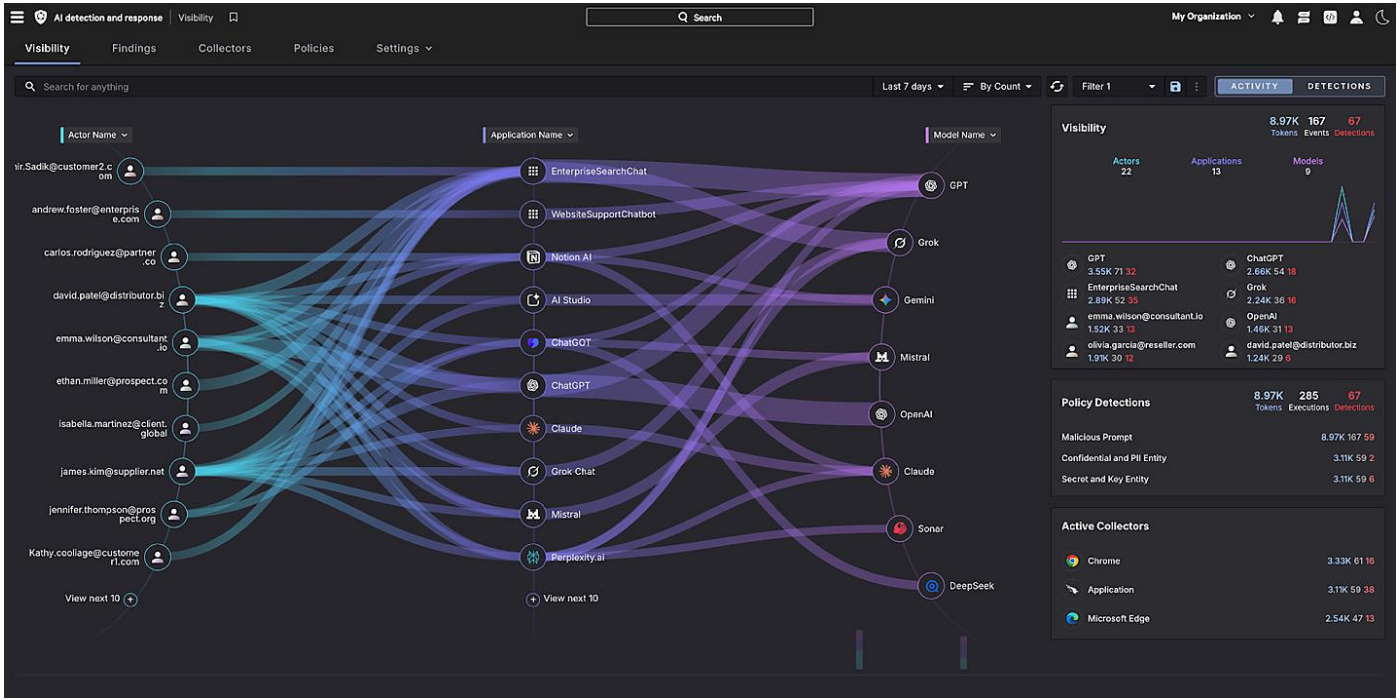

50%
Faster threat detection vs. traditional SIEM

80%
Reduction in alert fatigue with AI triage

300+
Out-of-the-box data connectors

< 5 min
Mean time to respond with SOAR playbooks

Crowdstrike Falcon AIDR

Quick Comparison of Sentinel Competitors

Scenario	Best Alternative
Large enterprise, complex needs	Splunk Enterprise Security
Regulated industries / compliance-heavy	IBM QRadar
Already on CrowdStrike endpoint	Falcon Next-Gen SIEM
Open-source flexibility / cost control	Elastic Security
GCP-heavy or flat-rate pricing needed	Google Chronicle
DevSecOps / multi-cloud monitoring	Datadog, Sumo Logic
Mid-market, strong forensics	LogRhythm, Exabeam
SMB / budget-conscious	Graylog, SolarWinds SEM
AD-heavy on-prem	ManageEngine Log360
SOAR-first approach	Palo Alto XSOAR

Endpoint Management: Securing the Device That Touches Your Data

What Is Microsoft Intune?

Microsoft Intune is a cloud-based endpoint management platform that manages and secures devices, including Windows, macOS, iOS, Android, and Linux, all from a single admin console.

In the context of AI and data democratization, the device is the last-mile risk. An employee accessing Azure OpenAI or Copilot from an unmanaged personal device bypasses every upstream control.

Intune ensures the endpoint is healthy, compliant, and trusted before access is granted. All of this feeding posture signals directly into Entra Conditional Access.

MDM & MAM

Full device management (MDM) for corporate devices and app-level management (MAM) for BYOD, without enrolling personal devices.

Compliance Policies

Define what 'healthy' means: encrypted disk, no jailbreak, current OS patch, EDR running. Non-compliant devices are blocked or quarantined.

App Protection Policies

Control copy/paste, save-as, and screen capture for Microsoft 365 and custom apps. Prevent Copilot output being pasted into personal apps.

Endpoint Privilege Mgmt

Grant users temporary local admin rights for specific tasks without permanent elevation. This reduces lateral movement risk from compromised endpoints.

Remote Help & Autopilot

Zero-touch deployment via Windows Autopilot. Remote assistance for support teams without sharing full control and preserving user privacy.

Tunnel & VPN Gateway

Per-app VPN via Intune Tunnel routes only managed app traffic through the corporate gateway, which means BYOD personal traffic stays private.

Intune in Practice: Securing the AI-Enabled Endpoint

Blocking AI Output Leakage

App Protection Policies prevent employees from copying AI-generated content (which may contain Confidential-labeled text) into personal Gmail, WhatsApp, or notes apps on BYOD devices. This includes devices which have not been enrolled.

Compliant Device for Copilot Access

Entra Conditional Access requires Intune compliance before granting access to Copilot for and Azure OpenAI endpoints. Unpatched, jailbroken, or unencrypted devices receive a 'remediate or be blocked' prompt automatically.

How Intune Plugs Into the Microsoft

Intune

Compliance signal & device health

Purview

DLP for managed app content

Intune is the trust anchor for t

Full Visibility, Intelligent Control, Even Real-Time Protection

Cloud Discovery

- Discover all cloud apps in use, along with shadow AI
- Risk scoring across 90+ risk factors
- Block or sanction apps directly from the portal
- Detect ChatGPT, Claude, and other unmanaged AI uploads

Data Protection (DLP)

- Inspect content in real time with session controls
- Block upload of sensitive files to unsanctioned apps
- Apply Microsoft Purview labels to cloud-stored files
- Policy templates for PII, PHI, PCI, and custom patterns

Defender for Cloud Apps is part of Microsoft Defender XDR — natively integrated with Entra ID, Sentinel, and Purview for a unified Zero Trust security posture

What Full Visibility Looks Like

Threat Detection

- UEBA: behavioral analytics to detect anomalous data access
- Impossible travel and token theft alerts
- Insider risk correlation with Microsoft Purview Insider Risk Mgmt and Supported Apps
- Automated remediation via Power Automate playbooks

Compliance & Governance

- 250+ app compliance certificates catalogued
- Continuous GDPR, ISO 27001, SOC 2 gap assessments
- API connectors for Salesforce, Box, GitHub, Google Workspace
- Unified incident queue with Microsoft Sentinel integration

Defender for Cloud Apps is part of Microsoft Defender XDR — natively integrated with Entra ID, Sentinel, and Purview for a unified Zero Trust security posture

Microsoft Defender for Cloud Apps Options

Feature	O365 Cloud App Security	MDCA (Full / E5)	Standalone Add-on
Shadow IT — app catalog	750+ apps (O365-similar)	31,000+ apps	31,000+ apps

Tier 1

Crowdstrike Falcon AIDR: Tracks all AI access from the user, down to the system, to the AI and back out of the network and offers alerting, exclusions and response.

Zscaler Zero Trust Exchange: Offers ability to inspect cloud-bound traffic and apply policies that restric access to unauthorized AI services. Will detect when employees attempt to upload data to AI platforms and auto-block.

Palo Alto Networks Prisma and Unit 42 Frontier AI Defense: behavioral analytics and deep inspection of network activity. Blends network and SaaS controls.

Skyhigh Security(McAfee): Cloud-based zero trust security that is data-aware. Monitor and mitigate security risks and shadow AI discovery.

Cisco Umbrella + Cloudlock: DNS-layer protection by monitoring traffic and proactively blocking unauthorized AI domains.

Forcepoint CASB: Reports on all AI and cloud application use, including shadow AI and enforces appropriate controles based on rules.

Tier 2

Grip Security: Identify-centric SaaS risk management, let's security teams manage API and integration surfaces. Strong discovery for AI tools employees have connected via OAuth and personal credentials CASB might miss.

DoControl: Provides app-to-app and identify-centric SaaS risk visibility, while surfacing shadow AI integrations and data flows between sanctioned and unsanctioned applications.

Obsidian Security: Focused on SaaS threat detection and response, including providing continuous visibility and analytics on unauthorized apps and shadow AI.

Tier 3

Securiti.ai: Extends into AI security and Governance with context-aware LLM firewalls to protect AI interactions including prompts, retrieval and responses. Stops shadow AI alongside other features.

Lasso Security: Independent, purpose-built platform for AI security — model risk, prompt injection and shadow AI usage. (Protect AI, formerly independent, is now part of Palo Alto Networks Prisma AIRS.)

Zentera: New platform positioning as dedicated shadow AI security that goes beyond what traditional CASB and SWG tools can enforce with AI.

The Data Governance 101

Data Map

Automated scanning and cataloguing of data assets across Azure, on-prem, and multi-cloud sources.

Sensitivity Labels

Classify data as Confidential, Highly Confidential, etc. Labels travel with the data and through Copilot, OpenAI, email, and Teams, etc.

Data Loss Prevention

Policy engines in place prevents sharing of PII, PHI, or trade secrets via email, Teams, SharePoint, or cloud upload.

The Data Governance Foundation for Secure AI

Insider Risk Mgmt

Machine learning detects risky sequences: mass download → USB copy → resignation. Integrated with HR signals.

eDiscovery & Audit

Legal hold, content search, and full audit trail across workloads. Copilot interactions fully logged.

DSPM for AI

Centralized visibility into which AI apps are used, what data they accessed, and policy compliance status. GA since late 2024; the unified DSPM experience completed rollout in May 2026.

Your Roadmap to Secure, AI-Enabled Data Democratization

Phase 1

(0–90 days)

- Deploy Microsoft Purview Data Map, including scans of M365, Azure SQL, Fabric OneLake, and on-prem SQL Server
- Enable Defender for Cloud Apps discovery to identify shadow AI tools in use
- Implement sensitivity label taxonomy (Public / Internal / Confidential / Highly Confidential)

Your Roadmap to Secure, AI-Enabled Data Democratization

Phase 2

(90–180 days)

- Configure DLP policies in Purview to block PII/PHI sharing to unsanctioned cloud apps
- Enable Conditional Access app control for high-risk SaaS (session policies via Defender)
- Configure Azure AI Foundry private endpoints and Entra RBAC; register AI agents under Entra Agent ID

Your Roadmap to Secure, AI-Enabled Data Democratization

Phase 3

(180+ days)

- Build internal RAG solutions on Azure AI Foundry + AI Search for self-service data Q&A
- Roll out Copilot with sensitivity label filters and Purview audit enabled
- Instrument Security Copilot for SOC acceleration and extend Entra Agent ID governance to every production agent
